Subject: Pictures of stack and plume

Hi Gary,

These pictures were taken today during my Method 9 observation at 12:20PM. As you can see, the plume is white in color, meaning that the fuel is burning hot enough and having a load on the Power House, that there is no smoke visible. The picture with sky behind the plume is a good example, being the end of the plume, there is no smoke.

Any questions, please give me a call at (509)322-7348.

Thank you,

Connie Chaney
